

# Broccoli

## - Alpha Green F<sub>1</sub>

- High domed heads with fine beads.
- Curd can be harvested after 75 days from transplant.
- Requires relatively short period of low temperature for curd formation, recommended for short crop in Spring season.

Alpha Green F<sub>1</sub>

## - Beta Green F<sub>1</sub>

- High domed heads with fine beads.
- Curd can be harvested after 75 days from transplant.
- Recommended both for warm to cool season cultivation as well as cool to warm season cultivation.
- Very less side shoot.

Beta Green F<sub>1</sub>

# Kohlrabi

## - Wordcol F<sub>1</sub>

- Very strong plants with large leaves.
- Wide adaptability due to very strong root system.
- Forms creamy green colored bulb even under hot and humid weather condition.
- High yield potential.

Wordcol F<sub>1</sub>

## - Beta Green F<sub>1</sub>

- Early maturing purple kohlrabi with excellent uniformity.
- Expresses deep purple color even under unfavorable climate condition of high temperature. Short leaves give better options for indoor farming. Crispy and juicy flesh is attractive in taste too.

Purple King F<sub>1</sub>

## Our Values

- Specialized for you : with continuous efforts in research and development, wide range of our products find their ways in various areas on the planet, we offer the best fitting products wherever you are farming, specialized for you
- Satisfactory to you : we meet our customers through our seeds, and providing seeds of quality is our promise with you, our seeds will remain satisfactory to you
- Sustainable with you : we respect the nature of agriculture, we are moving even slowly with you as we believe our way is the right way, our agriculture is truly valued when it is staying sustainable with you.

# Cabbage

## - Beatrix F<sub>1</sub>

- Extra early maturing cabbage for fresh market.
- Definitely the 1st maturing cabbage in your area wherever you are.
- 0.8~1.2 kilo head with bright green color looks attractive enough to be chosen by consumers.
- Best in high dense planting.

Beatrix F<sub>1</sub>

## - Travo F<sub>1</sub>

- Early maturing cabbage for fresh market.
- Produces 0.8~1.2 kilo head with dark green color head.
- Very compact as early maturing fresh purpose cabbage. Suitable for long distance transportation.
- Bolting is slow, recommended for early spring crop.

Travo F<sub>1</sub>

## - Home Run F<sub>1</sub>

- Early maturing cabbage with flavor of sweetness.
- Grows stably under low temperature condition due to strong root system.
- Fresh Green colored head is always favored by farmers and consumers.
- 1.2~1.5 kg in weight.

Home Run F<sub>1</sub>

## - Altos F<sub>1</sub>

- Mid-Early maturing white cabbage for processing purpose.
- Can be recommended for fresh market.
- Bright green color head with short core.

Altos F<sub>1</sub>

## - Constante F<sub>1</sub>

- Mid maturing round cabbage with very compact head (maturity of 85 days after transplant).
- Good cold tolerance helps this attractive cabbage stand in the field for certain period of time.
- Also can be stored in storage room for short-mid period.
- Can grow up to 2.5kg

Constante F<sub>1</sub>

## - Ocean 99 F<sub>1</sub>

- Typical tropical cabbage of flat head.
- Tolerance to heat and excess water condition.
- Bright green colored head with relatively long field holding
- Can be harvested at 58~62 days after transplant.

Ocean 99 F<sub>1</sub>

## - Green Space F<sub>1</sub>

- High yielding tropical type cabbage.
- Forms very big flat head.
- Good cold tolerance gives wider adaptability to areas/seasons both of heat and cold.
- Recommended in areas where Black Rot pressure is high.
- Can be harvested at 70~75 days after transplant.

Green Space F<sub>1</sub>

## - Chowon F<sub>1</sub>

- Semi flat type with 2.5~3.5 kg head, maturity 80~85 days after transplant.
- Very green attractive head color.
- Tolerance to both heat and cold condition.
- Intermediate resistance to black rot.

Chowon F<sub>1</sub>

## - Kiril F<sub>1</sub>

- Mid maturing white cabbage for processing purpose.
- Long field holding and excellent heat tolerance as processing type cabbage.
- Can be stored for short period of time.
- Well wrapping leaf structure that avoids thrips attack.
- 3.5~4.0 kg at full maturity.

Kiril F<sub>1</sub>

## - Vasto F<sub>1</sub>

- Mid maturing white cabbage for processing purpose.
- Produces perfect round head.
- Soft texture of leaf suitable for processing(sauerkraut).
- Attractive appearance with high uniformity.

Vasto F<sub>1</sub>

## - Verona F<sub>1</sub>

- Early maturing red cabbage, can be harvested at 75~80 days after transplant.
- Very compact and round head.
- Wide adaptability due to strong heat tolerance.

Verona F<sub>1</sub>

## - Adria F<sub>1</sub>

- High yield potential mid maturing red cabbage.
- Perfect round head with vivid purple color.
- Recommended for fresh as well as for storage purpose.
- Can be harvested at 85~90 days after transplant.

Adria F<sub>1</sub>
